STUDENT SUPERVISED RESEARCH:

Title of Project/Research

Improving access to care in the

the SCOFF Questionnaire on the
Detection of Eating Disorders at
the Primary Care Level: A
Program Development Project

Collaboration between Speech and Language Pathology Faculty, Occupational Therapy Faculty and myself to develop community outreach videos detailing child development, infant, toddler and young childhood nutrition and various other topics for families fostering children in Duval County. The goal is to provide education for the caretakers on typical child development so as to equip them to readily identify red flags that may present in foster children in their homes. This is a collaboration led by students and faculty to fulfill a need in our community.

Preceptor for Graduate FNP Students completing their Pediatric Rotation in Primary Care

Over 400 hours each calendar year since 2013 spent precepting nurse practitioner students in the pediatric primary care clinical setting during my clinical practice day.

RN to BSN Independent Study

Developed independent study for 4 graduating RN to BSN students nearing their graduation. Assignments were pathophysiology content focused and the course ran over the course of an 8-week semester. All students successfully graduated with their Bachelors of Science in Nursing degree.

Undergraduate Nursing Assessment Videos

With the help of two colleagues, we video recorded live demonstration of all systems of the body assessment for students from semester to semester to access and use as an adjunctive learning resource for their undergraduate nursing class.

New Course Development

RN to BSN - NUR 357 – A Conceptual Approach to Assessment and Pathophysiology for the Practicing Nurse Part 1

RN to BSN - NUR 449 - A Conceptual Approach to Assessment and Pathophysiology for the Practicing Nurse Part 2

Prelicensure BSN – NUR 424 – Sign Language for the Health Care Professional

Undergraduate Pediatric Simulation Development

Wrote and implemented high fidelity pediatric simulations utilizing real life scenario teaching techniques to prepare and educate the undergraduate nursing students prior to entering in o the pediatric clinical environment. Simulations focused on Oncological and Neurological emergencies in the Pediatric clinical setting.

Graduate Pediatric Simulation Development

Wrote and implemented pediatric simulation for the graduate FNP student utilizing real live actors (children) of various age groups to provide the students with the opportunity to talk to, assess and observe how to approach the pediatric patient in the primary care setting.
